Summary: Hardworking, self-starting full stack web developer with 15 years of combined hobbyist and professional programming experience in highly technical positions. Experience with working in a team and with leading a team to meet goals in high pressure situations.

Skills:

- **Languages**: Javascript, PHP, C++, SQL (MSSQL, MySQL, PostGres), HTML, CSS, Python, Ruby, Sass
- **Web Technologies**: React, Redux, Node.js, Socket.io, Rails, CRUD, REST, AWS (S3, EC2), Cloudinary
- **Development Technologies**: Git, Github, VS Code, NPM
- **Operating Systems**: Linux (Fedora, Debian based), Mac OS, Windows

Education:

- Devmountain, February 2020, Full Stack Web Development

Work History:

Student Developer
Devmountain - November 2019 - February 2020
- Developed full stack applications
- Applied REST principles to implement clean, efficient servers
- Used React/Redux to write functional front end clients
- Projects:
    - NoDB (Hero Registry) - Tracking heroes in the manner of the popular Anime Series "One PUnch Man", allowing users to add new heroes and change rankings
    - Personal project (anonet.xyz) - Allowed users to chat with others anonymously, utilizing Socket.io for real time chat room services, while also providing minor personalization settings
        - Technologies: Node, React, Redux, Express, Axios, Socket.io, Bcrypt, Massive, PostGres
        - Awarded "Most Technical Project"
    - Group project (digitalcouch.xyz) - Digital Couch is a hosted project that enables mental healthcare providers (or just 'providers') to connect with their clients online
        - Technologies: Node, React, Redux, Express, Axios, React-Toastify, Cloudinary, Bcrypt, Massive, PostGres, Sass

Work History (continued):
Satellite Network Analyst
SAT Corporation - May 2011 - December 2016
- Supervised daily operations as a team leader
- Wrote SQL queries to compile and manipulate data critical to daily operations
- Created, upgraded, and maintained web based and executable tools to triple the efficiency of daily operations using PHP, HTML, CSS, Javascript, JQuery, and VBA which were integral in securing a 12 million dollar contract
- Worked directly with customers and supervisors to deliver quality products and reports

Satellite Network Controller
United States Army - June 2004 - June 2011
- Designed, created, updated, and maintained databases to track, display, store, and process mission critical information with easy to use interfaces
- Created and maintained documentation and procedures for daily operations
- Maintained contact with end users to troubleshoot and maintain high quality communications
- Worked on a team to accomplish daily goals for troubleshooting, providing services to end users, and completing other tasks
